

RWD & Human Insight from Consulting & Analytics

TRANSFORMING DATA INTO ACTIONABLE INSIGHTS

Powered by [NorstellaLinQ](#)

The meaning behind the data

Clinical trials increasingly rely on real-world data (RWD) to guide their design and execution, but data means nothing without knowing how to apply it to the unique demands of your trial. Go beyond the numbers to understand what they mean for you, with RWD Optimization from Citeline's Consulting & Analytics team. Consulting & Analytics specialists are more than just data masters – they are also experts in clinical research areas. Use their insider perspectives to generate accurate, actionable insights about patients, sites, investigators, and more that you can't get from AI alone.

Best-in-class proprietary data & RWD

Consulting & Analytics experts leverage a vast, continually updated repository of proprietary data from Citeline tools like Sitetrove and Trialtrove. By integrating this data with other high-quality RWD sources and applying advanced deduplication and tokenization processes, the result is unique, longitudinal view of patients' journeys across the healthcare landscape.

Citeline's RWD Optimization

Inform your decision-making with the power of:

In-depth knowledge from the industry's largest team of therapeutically aligned, expert analysts.

A vast depth and breadth of continuously updated, integrated, and tokenized data.

The unique strength of insights derived from integrating RWD with proprietary data.

Bespoke data analysis tailored to your specific needs.
